

Preliminary Work

- Students must do the necessary theoretical calculations and circuit simulations by themselves, and add their own commentary where required. Cheating will not be tolerated.
- Reports must be written on the given template.
- All preliminary reports must be submitted by given deadlines to the given e-mail address. Late reports or reports sent to any other address will not be accepted.
- Students who failed to submit their preliminary report will not be allowed to participate in the experiment. This includes missing attachments, undelivered mails etc.

Experiments

- Students who arrive later than 10 minutes into the experiment will not be allowed to participate in the experiment and their experiment score will be zero.
- Each group should bring at least one set of required materials. Groups that do not have their materials will not be able to participate in the experiment.
- Each student in a group should contribute to the experiment. Groups are responsible amongst themselves to ensure equal participation. Unfair division of work or slacking during the lab session may affect your grade for the experiment.
- Students will be asked questions about the experiments during lab sessions. Answers given to these questions will affect your grade.
- Ask for a lab assistant to check your circuit before connecting the power supply in order to avoid injury, or damaging your components or lab equipment.

Rules of Conduct

- Be respectful to other students and lab assistants.
- Keep your voice and idle chatter to a minimum so as not to disturb other students and ensure you finish on time.
- Be careful when using lab equipment to avoid harming yourself, or damaging the equipment.
- Keep your workspace organized and clean. Students who do not leave their workspace clean will be deducted 10 points, and repeated offenses will increase this deduction by 10 points each.
- Make sure you have all your belongings when you are leaving the lab. Forgotten items will be thrown out.
- Students who insist on disrespectful and/or disruptive behavior may be removed from the lab, and their experiment score will be zero.
